

Statement relating to GP9 of the IDP

- 1) Blocking up of gable end window and new velux roof light above garage.

This work will have no negative affect on neighbouring properties and is similar to developments on surrounding properties. The blocking up of the gable end window will mean we no longer have a view over next doors garden, therefore offering them more privacy. The blocked up window will be rendered to match the rest of the gable end.

- 2) Replacement of existing shed with lean to style shed and open sided covered area with sloping roof

This will be no higher than the shed that was there previously. There will be guttering running the length of the shed which will run into a water butt to carry any rain water away from the shed and neighbouring boundaries. The materials used will be wood where possible, with the exception of the roof which will be a corrugated Perspex style.
