## Guernsey Annual Earnings Bulletin

2011 - Issue date 10th October 2012

## POLICY COUNCIL

the states of guernsey

### 1.1 Introduction

The Guernsey Earnings Bulletin monitors average earnings of all employees in the Bailiwick (excluding Sark) and provides a headline analysis of trends in average earnings. The data shown in Table 2.1.1 have been published in the States Strategic Monitoring Report (see www.gov.gg/kpi) since 2011. However, this bulletin contains previously unpublished details and some additional information, which became available in 2012. All monetary values presented are nominal unless otherwise stated.

Data is supplied by the Social Security Department and includes all (full and part time) employed people earning over the lower earnings limit. Incomes from self-employment, secondary employments and other non-earned sources are not included. This therefore gives a measure of the average change in primary earnings from employment and reflects the underlying change.

### 1.2 Headlines

- The median of all employees’ earnings was $£ 28,340$ in $2011,3.3 \%$ higher in nominal terms or $0.1 \%$ higher in real terms than in 2010.
- The median of male employees’ earnings was $£ 31,590$ in $2011,3.0 \%$ higher in nominal terms or $0.2 \%$ lower in real terms than in 2010.
- The median of female employees' earnings was $£ 25,090$ in 2011, $3.2 \%$ higher in nominal terms or less than 0.1\% higher in real terms than in 2010.
- Employees aged 40 to 44 had the highest median earnings in 2011 at $£ 33,930$ (2.2 times the median earnings of 15 to 19 year old employees).
- The median earnings of finance sector employees was $53 \%$ higher than the overall median at the end of March 2012.

| earnings (£) |  |  |  |  |
| $\mathbf{2 0 1 1}$ prices |  |  |  |  |$|$

Earnings data is recorded by the Social Security Department each quarter and is used to calculate median earnings of employees. The median is the middle value when sorted into numerical order. It is a measure of earnings from primary employment, unadjusted for numbers of hours worked i.e. the level can be impacted both by changes in numbers of hours worked and rates of pay. The measure does not include earnings employees may also gain from self employment, secondary employments or incomes from any other sources.

Figure 2.1.1 and Table 2.1 .1 show that median earnings have increased in nominal terms every year since 2005, when data first became available. Nominal median earnings increased by $3.3 \%$ between 2010 and 2011 to £28,340.

Real earnings are presented to show trends after the effects of inflation have been removed. All real figures shown in this report have been adjusted to 2011 prices.

Median annual earnings increased by $0.1 \%$ in real terms in 2011, compared to $-0.8 \%$ the previous year.

The lower and upper quartile earnings for 2011 and the previous six years are presented in Table 2.1.2. The inter-quartile range increased by $2.2 \%$ in real terms over the year between 2010 and 2011 and by $6.9 \%$ over the five years ending in 2011. This indicates that earnings from employment have become more widely spread.

Figure 3.1.1: Distribution of earnings (all employees)

The percentage of employees in each income band for 2011 is shown as a distribution graph in Figure 3.1.1. It provides a comparison between earnings of all employees, male employees and female employees.

Please note that differences between male and female earnings may result from differences in numbers of hours worked as well as differences in rates of pay for different jobs. This is not intended to be used as a measure of pay equality.

The distribution of all earnings shows a peak in the $£ 15,601$ to $£ 20,800$ band. The highest percentage of female employees' earnings was also in the $£ 15,601$ to $£ 20,800$ category. By contrast male earnings showed a peak in the $£ 26,001$ to $£ 31,200$ category.

Median earnings and annual percentage changes for male and female employees are presented in Tables 3.1.1 and 3.1.2. The median earnings of male employees was $£ 31,590,0.2 \%$ lower than in 2010 in real terms. Female employees continued to increase at a faster rate albeit with an increase of less than $0.1 \%$ since 2010, taking the median to $£ 25,090$.

Table 3.1.1: Median earnings (all male employees)

| Date | Nominal <br> median <br> earnings ( $\mathbf{f})$ | Nominal <br> percentage <br> change (\%) | Real median <br> earnings ( $\mathbf{(})$ <br> $\mathbf{2 0 1 1}$ prices | Real <br> percentage <br> change (\%) |

| $\mathbf{2 0 1 0}$ | $\mathbf{2 4 , 3 1 0}$ | 2.7 | 25,082 | 0.5 |
| $\mathbf{2 0 1 1}$ | $\mathbf{2 5 , 0 9 0}$ | 3.2 | 25,090 | 0.0 |

### 4.1 Median, lower quartile and upper quartile earnings - all employees by age

Table 4.1.1: Median earnings (all employees) by age at 2011

| Age group | Lower quartile <br> earnings ( $\mathbf{( s )}$ | Median earnings <br> $\mathbf{( \mathbf { f s } )}$ | Upper quartile <br> earnings (£s) |
| ---: | ---: | ---: | ---: |
| $\mathbf{1 5 - 1 9}$ | 12,090 | 15,600 | 18,590 |
| $\mathbf{2 0 - 2 4}$ | 18,980 | 25,610 | 31,980 |
| $\mathbf{2 5 - 2 9}$ | 19,890 | 26,910 | 35,100 |
| $\mathbf{3 0 - 3 4}$ | 22,750 | 32,630 | 44,720 |
| $\mathbf{3 5 - 3 9}$ | 22,880 | 33,800 | 48,230 |
| $\mathbf{4 0 - 4 4}$ | 22,880 | 33,930 | 49,790 |
| $\mathbf{4 5 - 4 9}$ | 21,970 | 32,630 | 49,010 |
| $\mathbf{5 0 - 5 4}$ | 21,190 | 30,940 | 45,890 |
| $\mathbf{5 5 - 5 9}$ | 20,280 | 29,510 | 44,330 |
| $\mathbf{6 0 - 6 4}$ | 16,380 | 24,830 | 34,580 |
| $\mathbf{6 5 ~ \& ~ o v e r ~}$ | 11,180 | 16,770 | 26,130 |

Figure 4.1.1: Median, lower and upper quartile earnings (all employees) by age at 2011

Figure 4.1.2: Median earnings (all employees) by age

Table 4.1.1 and Figure 4.1 .1 show the median, lower and upper quartile earnings of all employees by age group. The highest median earnings $(£ 33,930)$ occurred in the $40-44$ age group. The lowest $(£ 15,600)$ and second lowest ( $£ 16,770$ ) median earnings are for the youngest and oldest age groups respectively.

This could result more from differences in numbers of hours worked than differences in rates of pay.

The largest inter-quartile range was in the 45-49 age group ( $£ 27,040$ ) and the smallest was in the 15-19 age group ( $£ 6,500$ ). This shows the difference in the relative spreads of earnings by age group.

Figure 4.1.2 also shows median earnings of all employees by age group. It provides a comparison between 2006 and 2011. Increases can be seen across all age groups. The distribution peaked in the 35-39 age group in 2006; a lower age band than in 2011.

Median earnings of all employees by sector for March 2012 are presented in Table 5.1.1 and in Figure 5.1.1. Full year data are not available for 2011, but will be available for 2012 onward. The information is included for information, but will be superceded by full year data in the next edition. Please note that there are seasonal changes in earnings, so the level of earnings at March will differ to full year data.

Finance sector employees' had the highest median earnings ( $£ 44,980$ ) at the end of March 2012. This was $53 \%$ higher than the overall median at the same point in time.

The hostelry sector had the lowest median earnings ( $£ 16,380$ ) at the end of March 2012; $44 \%$ lower than the overall median.

### 5.1 Median earnings - all employees by sector

Table 5.1.1: Median earnings (all employees) by sector in 2011

| Sector | Lower quartile earnings (£s) | Median earnings (£s) | Upper quartile earnings (£s) |
| :---: | :---: | :---: | :---: |
| Agriculture, horticulture, fishing and quarrying | 15,340 | 21,060 | 26,780 |
| Manufacturing | 17,940 | 24,700 | 32,500 |
| Electricity, gas, steam and air conditioning supply | 25,220 | 31,460 | 40,300 |
| Water supply, sewerage, waste management and remediation activities | 22,620 | 28,340 | 34,580 |
| Construction | 25,220 | 31,460 | 40,300 |
| Wholesale, retail and repairs | 16,380 | 22,100 | 30,940 |
| Hostelry | 14,300 | 16,380 | 22,100 |
| Transport and storage | 19,500 | 25,220 | 35,100 |
| Information and communication | 24,700 | 33,020 | 45,500 |
| Finance | 30,420 | 44,980 | 74,100 |
| Real estate activities | 23,140 | 31,980 | 50,180 |
| Professional, business, scientific and technical activities | 26,260 | 37,180 | 54,860 |
| Administrative and support service activities | 19,500 | 26,260 | 36,140 |
| Public administration | 21,060 | 31,460 | 43,420 |
| Education | 16,380 | 25,220 | 43,420 |
| Human health, social and charitable work activities | 15,860 | 21,580 | 29,900 |
| Arts, entertainment and recreation | 18,460 | 27,820 | 44,980 |
| Other service activities | 12,220 | 17,420 | 24,180 |
| Activities of households as employers | 14,820 | 21,580 | 28,340 |

Figure 5.1.1: Median earnings (all employees) by sector in 2011

### 6.1 Methodology

The data used in this bulletin are supplied by the Social Security Department and includes all employed people in the Bailiwick (excluding Sark) earning over the lower earnings limit. Data regarding the numbers of hours worked by people are not currently recorded, so the trends in this bulletin reflect variations in hours worked as well as levels of pay.

Only incomes from primary employment are included. Other incomes which people may receive from self-employment, secondary employments and other non-earned sources (such as benefits, property or investments) are not included.

Data are based on the weekly earnings recorded at regular points throughout the year. These include a pro rata amount for wages paid as a regular salary or wages paid for hours worked. Annual earnings are derived by scaling up the weekly figures.
